

Labelling solution for British Library

The British Library is the UK's national library, providing reading room, bibliographic, document supply and information services, as well as exhibitions, publications and events. Unlike conventional libraries, the British Library doesn't allow its highly valuable books off the premises. Despite this, the monitoring of asset movements has to be absolutely flawless.

With the help of our consultants, the Library installed a network of 24 bar code label printers. The units are Zebra's range-topping industrial printers, chosen for their proven reliability under the most arduous conditions. Two-piece perforated tickets are printed on card, one part of which stays with the item. It had to be firmly established that printed images would remain fast, with no chance of offset onto a priceless book.

The resulting solution ensures that items are logged in and out quickly and accurately, with minimised opportunities for damage to occur.

About Codegate . . .

Codegate is a privately owned software development company, with its head office in Oxfordshire. We specialise in the provision of track & trace and mobile enterprise solutions. This includes a "full service" offering from functional specification through to design, production, implementation and ongoing maintenance.
