

## Picking errors reduced at Majestic Wine

Majestic Wine Warehouses found that the production of a paper-based pick-sheet for the warehouse staff to gather and dispatch the goods for all their stores could involve a number of errors resulting in wasted time and stock loss. With picking mistakes often being found only at the point of delivery, much logistical effort was being duplicated in the correction of the errors.

Working with I2 Mobile (now Codegate), Majestic introduced Symbol wrist-based terminals with RS1 ring scanners. The RS1, worn on the index finger, allows the operative to actuate the scanner with a mere touch of the thumb, allowing freedom of movement of both arms and hands. Each robust, wrist-mounted terminal is linked directly to Majestic's AS400 network via a wireless LAN within the warehouse.

The system greatly reduced the number of errors produced by the picking operation, reducing the time taken for a full stock check from 36 hours to 12 hours.

## About Codegate . . .

Codegate is a privately owned software development company, with its head office in Oxfordshire. We specialise in the provision of track & trace and mobile enterprise solutions. This includes a "full service" offering from functional specification through to design, production, implementation and ongoing maintenance.
