Asset Inventory

RFID enabled asset tracking software for smartphones and tablets

Do stock checks a hundred times quicker than using pencil and paper! Use Asset Inventory software on a smart device and RFID tags. Use bar codes if you prefer, it's still ten times quicker!

Track anything – Computers, printers and other IT equipment, Personal Protective Equipment (PPE),First Aid kits and other safety tools, lab instruments, hospital assets, machinery, vehicles...

Use indoors or outside. Locate assets easily outdoors using geo-locating and map pins, locate indoors easily using a built-in Geiger counter style finder app (RFID only).

Add new assets on the fly – Codegate will supply pre-printed and encoded labels for you to simply stick on and associate with an asset during any inventory check. Alternatively, you can connect a supported Zebra mobile printer to print and apply labels on the go.
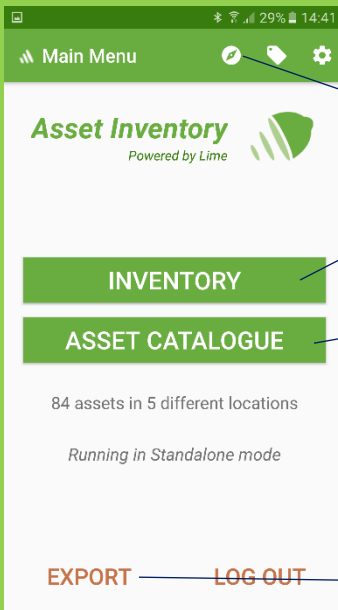

Know what's there, what's new and what's missing. As you check each location Asset inventory will show you how many items you've scanned, how many are still to be scanned and what they are. It will automatically add assets last seen in another location. At the end you can see what's missing.

Standalone or Lime? 2 modes of operation to choose from depending on your back-end set-up and where the data is to be sent.

Share data easily using any suitable Android or iOS sharing option, synchronise data between handhelds (Android only) or have data sent automatically to a remote FTP server (standalone mode only).

Flexible and easy to use right out of the box…

Simple layout

Easy inventory

Diminishing list of assets yet to be scanned

Finder tool for missing assets

Inventory any number of assets in any number of locations
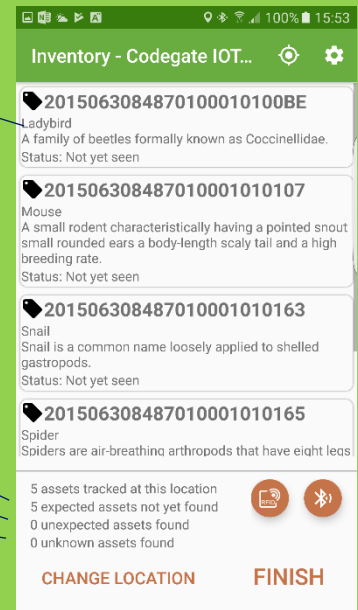

View / edit your assets at any time
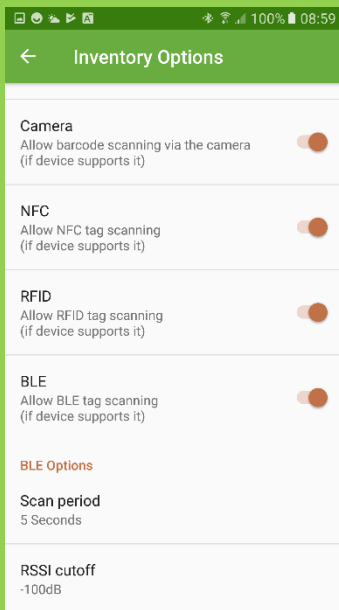

What's missing

What's moved

What's new

Share your data easily with other applications
